*humidity & condensation  
fan control*

**2015 Media Kit**

# About

**DewStop** is an in-wall fan control that adds intelligent moisture detection to any fan or ventilation system. DewStop senses condensation levels in the air, turns on the fan or ventilation system, and runs it until the room is back down to a safe moisture level.

DewStop has adjustable settings for condensation sensitivity and manual timer use.

Adjusting DewStop to sense lower or higher levels of humidity and dew point enables accurate response for a wide range of differently sized rooms and environments.

With QUE™ Technology added in, DewStop has

become the most advanced intelligent moisture detection system ever made. QUE™ learns your indoor climate trends to run the fan or ventilation system at the right time.

DewStop works with any ventilation fan up to six amps, turning that fan into an intelligent fan 'system'.

Moisture Sensitivity

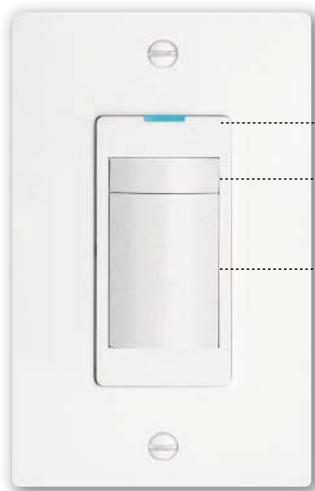

## Features and Benefits

- QUE™ Technology
  - Patent-pending ultra moisture sensing adaptive technology
- Adjustable Condensation Sensors
  - Turn on the fan when condensation is present and off when dry
  - Adjust sensors to solve moisture problem
  - Helps fight mold
- Adjustable Countdown Timer
  - Enables ability to choose how long the fan should run
  - Great for tenant and family use
- LED Light
  - Shows when the fan is ON
- Manual ON/OFF Control
  - For immediate ventilation
- Concealed Adjustment Settings
  - Tamper proof settings cover
- May be used to comply with CALGreen/Title 24

### Timer Settings

Countdown Timer

Minutes Per Hour Timer

## Features and Benefits

- The FS-3850 multi-timer is the ideal solution for controlling bathroom humidity, condensation, and mold in low-rise residential buildings covered by ASHRAE 62.2 as well as in commercial building structures, schools, hospitals and hotels.
- Two adjustable settings:
  - 1) A manual countdown timer.
  - 2) A minutes-per-hour timer. This allows the user to set for turn-on every hour to expel stale air and improve air quality.
- User can choose how long the fan will run.
- Manual on/off switch for immediate ventilation.
- A tamper-proof settings cover.
- An at-a-glance LED 'on' indicator.

# In The News

## **DewStop Slated to Unveil New Adjustable Bath Fan with Multi Timer at 2015 AHR Expo** *ASHRAE Compliant Bathroom Fan Wages Ultimate War Against Humidity, Condensation and Mold*

Seattle, Wash. – January 2015 – DewStop, the innovators of the latest “smart fan” technology, have just announced their participation in the 2015 AHR Expo in Chicago, January 26–28, 2015. Highlighting the company’s attendance will be the unveiling of the new **FS-3850 Adjustable Fan Timer** for the bathroom, laundry room, garage at **Booth #5783**.

The world’s largest HVACR marketplace, the AHR Exposition brings together over 2,000 exhibiting companies, representing the entire spectrum of the industry. The FS-3850 Adjustable Fan Timer from DewStop will be among the latest innovations attendees will have the opportunity to see in action.

According to the residential energy experts at Simply Sustainable, “A home that’s not ventilated properly will have poor indoor air quality and excess moisture that can impact the durability of the home and the health of its inhabitants.” The pros go on to point out, “When natural ventilation is not enough to do the job effectively, mechanical ventilation solutions can help. A mechanical ventilation system can be as simple as an exhaust fan with a programmable timer to exhaust stale air and moisture from the house.”

DewStop’s FS-3850 Adjustable Fan Timer is designed to do just that by the most effective means possible, taking the programmable timer solution to a whole new level. This bathroom fan with a multi-timer features two adjustable settings: 1) A manual countdown timer and 2) A minutes-per-hour timer. It allows the user to set for turn on every hour to expel stale air and improve air quality. Other controls afforded to the consumer include:

- Choosing how long the fan will run
- Manual on/off switch for immediate ventilation
- A tamper-proof settings cover
- An at-a-glance LED ‘on’ indicator

The product is also available with optional light control integration (Model FS-3875). Additionally, the adjustable fan timer is ASHRAE 62.2 (Ventilation and Acceptable Indoor Air Quality in Low-Rise Residential Buildings) compliant. A global society advancing human well-being through sustainable technology for the built environment, ASHRAE’s mission is to advance the arts and sciences of heating, ventilation, air conditioning and refrigerating to serve humanity and promote a sustainable world.

The FS-3850 Adjustable Fan Timer will be joined at the AHR Expo by DewStop’s flagship adjustable fan switchcontrol, the DewStop FS-3300 Adjustable Bathroom Condensation Control. Featuring integrated QUE™ moisture prediction and tracking software, sensing when condensation is present and automatically turns the fan on to dispel moisture which can otherwise cause mold and mildew or damage to wood furnishings, paint and wallpaper.

DewStop’s most recent bathroom fan control is the ideal solution for controlling bathroom humidity, condensation and mold in low-rise residential buildings covered by ASHRAE 62.2 as well as in commercial building structures, schools, hospitals and hotels. The DewStop FS-3850 (MSRP \$39) is available in white and almond and will be available for demonstration at 2015 AHR Expo Booth #5783.

### **About DewStop**

DewStop, innovators of the latest “smart fan” technology, manufactures bathroom exhaust fan controls that transform ordinary bathroom fans into smart fans. Patent Pending QUE™ Technology, adds an incredible new level of sophistication. QUE™ gathers data such as temperature and humidity levels in a room and uses this information over time to adapt to your climate and use. DewStop model FS-3300 with QUE™ Technology can adapt to virtually anyclimate, regardless of geographic location or season, providing condensation protection by turning ON your fan or ventilation system at the right time – saving energy, while removing harmful condensation and the moisture it leaves behind. These controls provide a user-friendly, cost-effective way for any homebuilder or homeowner to monitor and control the effects of moisture and condensation in the home thus reducing the possibility of damage to property as well as preventing mold and mildew proliferation. The technology, ease of installation and use of DewStop fan controls render them standard equipment for any bathroom. For additional information on the company, please visit [DewStop.com](http://DewStop.com).
